

Grow Local Farmers

COMPANY PROFILE

WA: +267-73961421

PLOT 1888 LEDUMADUMANE, MOGODITSHANE
Email: enquiries@myfarmhousekitchensbw.com

Seedlings grown to order by variety and time of transplanting for farmers in south eastern districts.

VEGETABLE & HERB SEEDLINGS

PRODUCED TO ORDER

- Summer: Tomatoes, green pepper, spinach, ginger, chillies, and beetroot
- Winter: Cabbage, lettuce, broccoli, cauliflower, onions, garlic, and herbs.

MFK-Gardens Nursery began operations in 2020 during the COVID-19 lockdowns when borders were closed to farmers. We began supplying farmers in the southern region of Botswana with quality seedlings for summer and winter crops with 40,000 seedlings every six weeks. In 2021, we expanded the facility by four—folds with the capacity to produce 160,000 seedlings every six weeks.

Our newly developed, nursery facility is now just minutes away from Gaborone city. **We only grow seedlings for which an order is placed.** This means we tailor the seedling production to your needs. This starts from seed selection, to managing their suitability for your locality by weather, water availability, water quality types and if they are produced under protective shades.

We consistently produce actively growing, disease free, microbe-rich starter seedlings. In order to achieve this, we implemented several processes to minimize the risk of supply failures to growers. We grow the seedlings in a sturdy greenhouse structure that withstand frosts, hails and storms. We have a close working arrangement with all major seed supply companies in southern Africa. Together, this partnership and co-operation works to ensure that the best and newest varieties that suit the southern Africa climate conditions are available for commercial production. We also have water catchment and bowser management systems and pumps, as well as carry out daily checks for pest or disease outbreaks in a safe and timely manner. We conduct regenerative soil practices so that as the ecology and soil fertility builds, we rely less on chemicals to improve plant health. This assured process gives all customers the peace of mind that they are buying good, clean, price conscious and healthy stock from a well-established reputable nursery. We further offer training programmes to farmers showcasing the practices in our nursery on how they too can improve the ecology of their farms.

MFK-Gardens Nursery will gladly assist growers with variety selection options for their local area. Your orders are placed in the hands of people who care and understand the importance of orders to eventual health and financial outcomes.
